Route 3, Box 200

GRESHAM, OREGON

Warehouse located at the corner of Hogan Road and Palmquist Road in the southeast corner of Gresham, 1¼ miles from the center of town.

Alton Splawn and his brother Elmus are the owners and operators of the business started by their father while both brothers were overseas during World War II.

SHIPPING TIME—Orders are shipped at proper planting time unless a shipping date is given on the order. All orders cannot be shipped at the same time. Should your bulbs arrive before you wish to plant, unpack at once and store in a cool dry place.

PREPAID—All prices quoted in retail section include delivery by prepaid Parcel Post or Express **except on orders of less than \$3.00**. Kindly include 25c extra on these small orders to cover cost of packing.

Do not send money for sales tax.

Look for your extra bulbs. You will be surprised at the number.

TERMS—Cash with order, personal check, Express or money order. Stamps are acceptable in payment of small orders.

C.O.D. ORDERS—We cannot accept C.O.D. orders, as it slows us down at a very busy season, increases our operating expenses and costs you an additional C.O.D. fee. Our money-back guarantee 's your assurance of satisfaction.

GUARANTEE—Since your growing conditions are out of our control we give no warranty either express or implied as to the results of the planting and growing of any bulbs we ship. In no case will we be responsible for more than the purchase price. **WE DO GUARANTEE** all our bulbs to be true to name and disease free. If for any reason you are not completely satisfied when the bulbs arrive, return immediately and the purchase price will be refunded, together with the cost of shipping.

SIZES—(All measurements are diameter, or across) No. 1, 1½" and up; No. 2, 1¼" to 1½"; No. 3, 1" to 1¼"; No. 4, ¾" to 1"; No. 5, ½" to ¾". Large is No. 1 and No. 2; Medium is No. 3 and No. 4.

WHAT SIZE SHALL I BUY?—The large size will, of course, make the best spikes and give the best results; however, if you wish to economize, the medium size will give excellent results, especially if they are fed and watered. They will bloom to the last bulb and make a good-sized spike, although the flower head may not be as long as that of the large size.

CORONA

GLADIOLUS CULTURE

First of all have good bulbs to start with. Gladiolus can be planted as early in the spring as the ground can be worked and up to the last of June. By planting at intervals the blooming season can be continuous from June until freezing weather.

FERTILIZING—While glads will respond fine on a good rich garden soil they should not be fertilized heavily. A heavy application of fertilizer not only doesn't seem to help them, it sometimes actually seems to harm them. If you think something should be put on, give them a light application of commercial fertilizer or a little manure, but do not allow any of either to come in contact with the bulbs.

SOIL—Any kind of soil will do. They do not like wet feet, so it should be well drained. A little water will help and on well drained soil give them a lot of water as they come into bloom and you will be amply rewarded with lots of fine long spikes.

Do not plant near strong growing plants or trees. They will rob the soil of moisture and plant food.

SPRAY OR DUST when the glads are about ten inches high and repeat every week or ten days until just before they bloom. 5% DDT is about the simplest and best.

CUT THE FLOWERS if you want to, but leave four leaves to produce the bulb.

DIG a month or so after blooming or later if they are still green. Do not pile bulbs more than four inches deep. Dust with DDT lightly.

DRY in an airy place. Heat will help to remove the moisture. When dry (two or three weeks) remove the roots and dust again with DDT. After another two or three weeks of drying store for the winter in a cool airy place. Keep from freezing.

BEFORE planting it is well, though not essential, to dip the bulbs in a solution of Lysol, one tablespoonful per gallon of water, for three hours.

This Pacific Northwest, with its long growing season, its ideal climatic conditions, and its fine soil is the most nearly perfect bulb growing area in the whole world.

When you buy your gladiolus in this area you are assured of a high quality bulb, but when you buy from Splawn's Gladiolus Gardens you will enjoy still more advantages. We produce a great many bulbs. This year we will have 3,000,000, not counting planting stock. Our bulbs are all carefully hand cleaned and graded, and treated against thrip. They are cured quickly and thoroughly in controlled temperature and humidity, and stored in a specially designed warehouse.

With our large volume we are able to give you better quality by discarding the bulbs that do not quite come up to our high standards of grading.

We can operate on a smaller margin, thus you will find our bulbs priced lower.
